- Split- (Orange, Aqua or microV series) are designed with separate pump and reservoir. The pump includes an electronic PCB and the pump motor. The reservoir contains the float and the switching mechanism to activate the pump, and must always be kept level and clean for proper operation of the float switch. The float must be cleaned regularly.

The infrastructure of the terrain, the cabling for the enchanting garden lighting, but also the drainage, is optimal. First, all the water is collected by means of a newly built sewerage system at the lowest point of the terrain in a pit with a pump system, where there is a gravel bin of approx. 35 m³ below the pond as an extra overflow unit.
