~~The main functional groups for AS Chemistry are shown below. • When studying reactions of a homologous series, the alkyl group is relatively unimportant – it is the functional group that reacts. With so many isomers possible, it is important that each has an individual name. The examples below show the steps needed to name an organic compound.~~

~~In organic chemistry, a functional group is a set of atoms within molecules that function together to react in predictable ways. Functional groups undergo the same chemical reactions no matter how large or small the molecule is. Covalent bonds link the atoms within functional groups and connect them to the rest of the molecule.~~
