Creating a UI Design System The best way to start is by building an inventory of all the different patterns, colours, text styles and assets which you will use in your design. It should be a clear inventory which shows all the components and features needed to build a product (Website or Application).

~~Creating a UI Component Design System (step by step guide ...)~~

Developers load web components in different ways, from using a module loader like StealJS or RequireJS, to directly imbedding the scripts on the page. To give your component's users maximum flexibility, consider using steal-export to build your project in several common formats on the web (ES6, CJS, AMD, etc.).

Assets and JSON module imports. UI5 Web Components aim to be feature rich and with a minimal code footprint at the same time. In order to achieve this, most UI5 Web Components packages ship their assets as .json files while also providing a public module import for them.. The assets in question could be i18n texts, icons, additional themes parameters, CLDR, etc..
