The book details the innovative TERM (The Enormous Regional Model) approach to regional and national economic modeling, and explains the conversion from a comparative-static to a dynamic model. It moves on to an adaptation of TERM to water policy, including the additional theoretical and database requirements of the dynamic TERM-H2O model.

Economic Modeling of Water - The Australian CGE Experience ...

Abstract Over the last 25 years, economic water policy models have evolved in concept, theoretical and technical methods, scope and application to address a host of water demand, supply, and management policy questions. There have been a number of theoretical and empirical advances over this period, particularly related to estimation of nonmarket, public good water-related values involving different methods of valuation.

Economic Modeling of Water: The Australian CGE Experience ...

When economic models include water accounts that feed into production functions, they model impacts on the marginal product of water. Policies that improve the link between the marginal product and price of water will improve water allocation, while advanced economic models such as those presented here can enhance our ability to explore the possible impacts of improved policy.

Economy-Wide Modeling of Water at Regional and Global ...

MAGPIE is a global, spatially explicit, economic land and water use model that solves in a recursive dynamic mode (Lotze-Campen et al., 2008, Schmitz et al., 2012) . The model distinguishes between 10 world regions on the demand side and solves grid-specific (aggregated units of 0.5 degree resolution) on the supply side.

cords. When the level of water reached a certain level in a tank, pumps and drains would be activated. To their surprise, Phillips and his associate Walter Newlyn found that MONIAC could be calibrated to an accuracy of 2%. The flow of water between the tanks was determined by economic principles and the settings for various parameters.
