Hidradenitis Suppurativa An Issue Of

Hidradenitis suppurativa (HS) is a painful, long term skin condition that causes abscesses and scarring on the skin. The exact cause of hidradenitis suppurativa is unknown, but it occurs near hair follicles where there are sweat glands, usually around the groin, bottom, breasts and armpits. For reasons that are unknown, more women than men have the condition.

Background: Hidradenitis suppurativa (HS) is a chronic inflammatory disease characterized by painful nodules, sinus tracts, and significant scarring. Although the pathogenesis of this disease is not well established, there is increasing evidence to suggest that it is an immune-mediated disorder. Previous studies have suggested a relationship between HS and thyroid disease, which is also driven by an autoimmune process.

This is the first book to specifically deal with hidradenitis suppurativa, a common but overlooked disease that regularly causes significant problems for both patients and doctors. The first section of this book presents the best current knowledge about diagnosis, pathogenesis and complications. The second section offers comprehensive guidelines on diagnosis and therapy. The book will assist doctors in providing a broader range of treatments for their patients. To increase the practical usefulness of the book, a description of the patients' perspective and patient information is included.

Despite being a relatively straightforward clinical diagnosis, recognition of hidradenitis suppurativa (HS) is highly variable, and clinical management is challenging and complex.

Written by the world's leading experts in HS, *A Comprehensive Guide to Hidradenitis Suppurativa* brings together up-to-date scientific evidence on the diagnosis, patho-mechanisms, comorbidities, and multi-faceted medical and surgical interventions for this debilitating condition-in one convenient reference. Covers every aspect of this complex skin disorder: etiology, pathophysiology, epidemiology, medical, alternative therapies, a range of surgical options, laser treatments, and comorbidities. Discusses specific patient populations such as children, women of childbearing potential, and pregnant and breastfeeding women. Because HS has higher prevalence in people of skin of color, this patient population is well-documented in the text. Offers insights into multi-disciplinary care, patient support and education, patients at risk for rapid disease progression, and clinical and translational research. Features procedural videos covering laser therapies, de-roofing procedures, excisions and closure techniques, cryoinsufflation techniques, and special wound care material selection and techniques. Includes recent FDA-approved drugs as well as those drugs and therapies that show future promise. Identifies evidence gaps that provide a springboard to the future innovations in HS care to come. Edited and authored by global experts who have co-authored 2019 U.S. and Canadian guidelines on hidradenitis suppurativa. Enhanced eBook version included with purchase. Your enhanced eBook allows you to access all of the text, figures, and references from the book on a variety of devices.
