PZ096 is a generic OBD II code, which means that it has the same meaning for the Hyundai i30 as it would any other vehicle. It specifically indicates that your i30 detected that it is running too lean (too much air for the amount of fuel present). Bank 1 is the side of the engine with the first spark plug in the firing order. If your i30 has a four cylinder engine, you don't need to worry about this.
