The AUTOSAR Adaptive Platform architecture has layers similar to Classic Platform but is a service-oriented architecture (SOA), which provides a foundation to handle highly compute intensive...

## Introduction to AUTOSAR - MathWorks - Medium

The AUTOSAR Classic Platform (CP) standard addresses the needs of deeply-embedded ECUs, while the needs of ECUs described above cannot be fulfilled. Therefore, AUTOSAR specifies a second software platform, the AUTOSAR Adaptive Platform (AP). AP provides mainly high-performance computing and communication

Adaptive Platform Release Overview - [autosar.org](https://autosar.org)  
The Adaptive AUTOSAR platform implements the AUTOSAR Runtime for Adaptive applications called ARA. It has two types of interfaces such as service interface and API interface. This platform is having consists of different functional clusters. Each cluster is grouped services and the Adaptive AUTOSAR basis. Each functional cluster is aimed: To assemble the Adaptive platform functionalities.

AUTOSAR Runtime for Adaptive applications. ARA consists of application interfaces provided by Functional Clusters, which belong to either Adaptive Platform Foundation or Adaptive Platform Services.

Explanations of Adaptive Platform Design - AUTOSAR  
The AUTOSAR initiative (AUTomotive Open System ARchitecture, [www.autosar.org](http://www.autosar.org)) started developing the AUTOSAR Adaptive Platform with the aim of fulfilling application requirements such as highly-automated driving. These requirements include software updates over the air to integrate improved algorithms into vehicles as well as the support of computations that simultaneously require high
