The static content is the content that can be delivered directly to the end users without any modification whereas dynamic content may subject to change based on user inputs. Hypermedia is the next level of multimedia experience which extends the notion of hypertext links to include not only text but a wide range of other multimedia elements such as audio, video, and graphics.

Difference Between Hypertext and Hypermedia | Difference ...

Acces PDF Making Hypermedia Work A Users

Hypermedia is a relatively new term created to describe the fusion of two other new technologies: multimedia and hypertext. Multimedia refers to the capabilities of modern computers to provide information to a user in a number of different forms (sometimes called modalities) including images, graphics, video and audio information, in addition to the standard textual output of older computers.

How to Use HIPR - Hypermedia Basics

The most basic level of hypermedia is shoving links into the response body (thanks Resources!) but then the client has to do a lot of detective work to figure out what they can do next. In the past folks would just shrug and say "you have a URL and a link relation, that's a good start", but these days there are quite a few popular
