Dan,a career criminal wants,needs,out from the world of crime. The last job, he promised Berenice, would achieve just that but it was a promise he could not keep. Desperation setting in by the loss of two of his crew,no financial gain and losing the love of his life,left him no alternative but to arrange One Last Job The job achieved its aim and financial freedom was within his grasp. Planning his new life came easy, until, one of his crew arranged to have him murdered and brutally slaughtered his best friend. In hiding,the world believing him dead,it had taken three years to devise the revenge he would meticulously deliver. Ruining the man responsible was the goal. As events unfold, twisted rage surging through every sinew of his body, it would see Dan commit the most brutal crime of his life. Cold

bloodied, calculated murder. For the man who would succumb to his merciless wrath, death will be excruciating, and in the most heinous way imaginable

The story of Wyndham Clifford Watts is one of humble beginnings and exceptional ingenuity; originally from Gwent in Wales, W Clifford Watts moved to South Cave in Yorkshire and, in 1937, bought a Model T Ford and began delivering farm produce. With one successful hauling endeavour under his belt, he decided to become a supplier of building materials, a business for which there was great demand at the time. Again, he was successful and obtained his first contract with F Hall at Brough, who used his materials to build the Blackburn Aircraft runway. By 1939, W Clifford Watts had a number of employees under him and had joined the war effort by supplying much needed sand bags to the ARP posts around East Yorkshire. After further rapid expansion of the company, W Clifford Watts was incorporated to become a private limited company in 1944. The company would have been nothing without the mechanical support of the various vehicles and machines utilised for the work. This book includes 184 stunning pictures ranging from archival black and white photos of Fordson 7Vs, during the construction of RAF airfields in 1941, to extensive colour pages, depicting the large scale quarrying operations carried out by the company. Some of the vehicles that donned the W Clifford Watts livery were Foden S21 eight-wheelers, Dodge KT900s, MAN six-wheeler cement mixers, 1995 Scania, 1974 Leyland Bisons and DAF CF six-wheelers, to name just a few.

More than the document of a remarkable project: Buy Me A Mercedes-Benz shows how various forms of expert knowledge have been combined and interwoven to finally generate an unconventional, breakthrough museum design. Providing insight into the various ideas, experiences and ambitions behind the project, this book allows visitors to take the museum home. Through photographs, diagrams, text, and drawings, this book explains the unique Mercedes museum design model, developed by UN Studio: the digitally programmed, three-dimensional, cross-connected trefoil. Implementing this model has resulted in a building that radically breaks with many of today's architectural conventions, a building that is highly complex, but still maintains a strongly directional structure, which provides many surprising perceptual experiences.

More complex and imposing than any other vehicle in the British emergency services, the fire engine has a long and interesting history. The earliest water pumps had been developed by the eighteenth century – basic manual pumps that had to be hauled around by people or horses, and were often only used on fire-insured premises. In the nineteenth and twentieth centuries horse-drawn, steam-powered fire engines, and eventually motorised fire engines, came to revolutionise firefighting, offering far greater versatility and the brigades came to be run by the municipalities. In this beautifully illustrated introduction, Eddie Baker charts the history of fire engines and their variants, and the increasingly complex equipment they have carried, such as high-rise ladders and high-pressure hoses. He also explains the wider history of the fire service and how the engines have been shaped by its needs and, most importantly, those of the firefighters themselves.

The book provides a comprehensive and timely report on the topic of decision making and decision analysis in economics and the social sciences. The various contributions included in the book, selected using a peer review process, present important studies and research conducted in various countries around the globe. The majority of these studies are concerned with the analysis, modeling and formalization of the behavior of groups or committees that are in charge of making decisions of social and economic importance. Decisions in these contexts have to meet precise coherence standards and achieve a significant degree of sharing, consensus and acceptance, even in uncertain and fuzzy environments. This necessitates the confluence of several research fields, such as foundations of social choice and decision making, mathematics, complexity, psychology, sociology and economics. A large spectrum of problems that may be encountered during decision making and decision analysis in the areas of economics and the social sciences, together with a broad range of tools and techniques that may be used to solve those problems, are presented in detail in this book, making it an ideal reference work for all those interested in analyzing and implementing mathematical tools for application to relevant issues involving the economy and society.
