~~Overactive Bladder in Clinical Practice~~

Overactive bladder (OAB) is a common syndrome characterised by unstable bladder contractions, resulting in urinary urgency, frequency and nocturia (defined in Table 1). Classically, patients with OAB report difficulty suppressing the urge to urinate. OAB is frequently associated with urge incontinence.

Background: Current treatments for overactive bladder (OAB) have limited efficacy, low persistence and a high rate of adverse events commonly leading to treatment cessation in clinical practice. Clinicians in Asia commonly use traditional Chinese medicine as an alternative for OAB treatment despite it having uncertain efficacy and safety.
