Please click the links below to view a detailed list of courses in the respective categories.

Individually, the fields of organizational politics and strategic information technology have soared in popularity. Studies suggest that the interaction between the two would prove beneficial to both the academic and corporate domains. This integration would serve to enable, support, and manage modern businesses. Strategic Information Technology Governance and Organizational Politics in Modern Business gives voice to fresh perspectives on the development, implementation, and practice of information systems and technology in organizations. This book is beneficial for business people, undergraduate students, postgraduate candidates, and researchers looking to gain a more in-depth understanding of the influence of socio-technical factors on ICT operations.

This book is about African Pentecostalism and its relationship to religious beliefs about a pervading spirit world. It argues that Pentecostalism keeps both a continuous and a discontinuous relationship in tension. Based on field research in a South African township, including qualitative interviews and focus group discussions, the study explores the context of African Pentecostalism as a whole and how it interacts with the concepts of ancestors, divination, and various types of spirit. Themes discussed include the reasons for the popularity of healing, exorcism, the "prosperity gospel," the experience of the Holy Spirit, Spirit manifestations and practices resembling both traditional and biblical precedents, as well as scholarly discussions on African Pentecostalism from theological and social

scientific disciplines. The book suggests that the focus on a spirit-filled world affects all kinds of events and explains the rapid growth of Pentecostalism outside the western world.

This book reflects on the complex and contested idea of South Africa, drawing on a wide range of disciplinary perspectives. Ever since the delineation of South Africa as a country, the many diverse groups of people contained within its borders have struggled to translate a mere geographical description into the identity of a people. Today the new struggles 'for South Africa' and 'to become South African' are inextricably intertwined with complex challenges of transformation, xenophobia, claims of reverse racism, social justice, economic justice, service delivery, and the resurgent decolonization struggles reverberating inside the universities. This book covers the genealogy of the idea of South Africa, exploring how the country has been conceived of by a broad group of actors, including the British, Afrikaners, diverse African nationalist traditions, and new formations such as the Economic Freedom Fighters (EFF), Black First Land First (BLF), and student formations (Rhodes Must Fall & Fees Must Fall). Over the course of the book, a broad range of themes are covered, including identity formation, modernity, race, ethnicity, indigeneity, autochthony, land, gender, intellectual traditions, poetics of South Africanness, language, popular culture, truth and reconciliation, and national development planning. Concluding with important reflections on how a colonial imaginary can be changed into a free and inclusive postcolonial nation-state, this book will be an important read for Africanist researchers from across the humanities and social sciences.

With social inequity in urban spaces becoming an increasing concern in our modern world, *The Elgar Companion to Transport, Space and Equity* explores the relationships between transport and social equity. Transport systems and infrastructure investment can lead to inequitable travel behaviours, with certain socio-demographic groups using particular parts of the transport system and accessing particular activities and opportunities.

Technical and vocational education and training at technical schools are major contributing factors in combating poverty, unemployment, and inequality. The primary purpose of technical and vocational education and training is to prepare students and learners for the world of work and for a smooth transition from education institutions into the workplace. As the Fourth Industrial Revolution continues to create more radical changes in the labor market, experts are calling for a reform of education, including vocational education and training and adult and professional education. *New Models for Technical and Vocational Education and Training* is an essential scholarly research book that examines TVET and CET colleges and programs that provide intermediate skills to enhance students' chances of employability and entrepreneurship in Industry 4.0. The book explores knowledge in respect to workforce preparation, digital skills development, teaching and learning of TVET, flexibility and articulation of TVET to respond to work-integrated learning, and reskilling and upskilling to avoid skill mismatches. It is ideal for TVET schools, academicians, curriculum designers, managers, training officers, administrators, vocational professionals, researchers, and students.

National Department of Sport and Recreation South Africa (SRSA), as outlined in their National Sport and Recreation Plan (NSRP) and the South African White Paper on Sport and Recreation focuses on three pillars namely, 1) an active nation; 2) a winning nation and 3) an enabling environment. The need for sport and recreation facilities is further emphasised in Priority Two of the South African White Paper on Sport and Recreation. This priority focuses specifically on the provision of sport and recreation facilities and states that the challenge in the provision of facilities is not simply about a shortage, but also the location of the facilities as well as the effective management thereof. Local government has the responsibility of providing an enabling environment through the provision of existing sports and recreation facilities and building of new facilities. Effective sport and recreation provision relies on the effective management of these facilities (SRSA, 2012). Facility Managers need various administrative skills in order to operate facilities efficiently and effectively. The coordination of these management principles and standard operating procedures is critical in the effective and efficient management of sport and recreation facilities today. This study presents a first attempt to determine the level of management capacity of sport and recreation facilities by local government in the City of Tshwane Metropolitan Municipality in the Department of Sport, Recreation, Arts and Culture. The research question for this study was therefore formulated as: "What is the management capacity of Sport and Recreation Facility Managers in the City of Tshwane Metropolitan Municipality?" Based on this particular research question, it was hypothesised that: H0: The management capacity of Sport and Recreation Facility Managers employed in the City of Tshwane is satisfactory/ high. H1: The management capacity of Sport and Recreation Facility Managers employed in the City of Tshwane is unsatisfactory/ low. The aim of the study was to determine a management capacity profile of sport and recreation facilities in the City of Tshwane Metropolitan Municipality. Specific objectives of the study were to: - Explore and analyse the existing management capacity of Sport and Recreation Facility Managers according to the dimensions of the Capacity Analysis Tool; - Identify potential problem areas in the operations of sport and recreation facilities related to management capacity; and - Formulate recommendations to the appropriate decision makers in the City of Tshwane Metropolitan Municipality to create enabling environments for sport and recreation facilities of the local authority under study.

Data were gathered by means of a self-administered Capacity Analysis Tool completed by full time Sport and Recreation Facility Managers of the City Tshwane Metropolitan Municipality's Department of Sport, Recreation, Arts and Culture. A purposive research sample of eight (n=8) was used. The study critically analysed and evaluated the perceptions of the level of management of the City of Tshwane Metropolitan Municipality and its capacity to manage its sport and recreation facilities. The results are not generalised but specific to the research sample. Effective management and possible ineffectiveness were identified to formulate guidelines for increased management capacity. The research was quantitative in nature and data interpretation and analysis was therefore made by use of tables, graphs and statistics. Results for the study indicated that sport and recreation facilities are geographically decentralised over the five regions in the City of Tshwane Metropolitan Municipality, namely the South region, the North West region, the North East region, the Central West region and the East region. Part-time, full-time and voluntary staff work at these sport and recreation facilities, all of whom perform different roles and responsibilities and management tasks. An overall collective mean score of $\bar{x} = 2.11$ ($SD=1.34$) was recorded for all eight management dimensions of management capacity as evaluated by the Capacity Analysis Tool. These results, therefore, confirms the stated H1 for this study. It is, therefore, concluded that sport and recreation managers at the City of Tshwane Metropolitan Municipality perform below average in the majority of elements over the eight management dimensions of management capacity. This result suggests that sport and recreation facilities are most likely not managed optimally to the benefit of all stakeholders. Recommendations for this research centred around improving those dimensions of management capacity that needed to be improved as they performed below average, which included clearly defined duties and responsibilities of employees guided by policies and a departmental constitution that is agreed upon by all members of the department, hiring of adequate staff and personnel in the right positions, increasing networking and fundraising capacity, revisiting job descriptions, provision of adequate and continuous training, regular maintenance of sport and recreation facilities and hiring of skilled contractors, provision of adequate resources to staff members to perform duties effectively and advocacy of employees and community members. The effective and efficient management of sport and recreation facilities, including a high capacity to manage sport and recreation facilities is essential and therefore, the following aspects are suggested for the undertaking of further research: A three year review of the status of management of sport and recreation facilities in the City of Tshwane Metropolitan Municipality could be conducted to determine the management capacity of Sport and Recreation Facility Managers to manage sport and recreation facilities; Investigate the community's perception of sport and recreation facilities with regard to service delivery and meeting the community's overall needs for sport and recreation participation and quality of life enhancement; Investigate the management capacity of middle and higher management level employees with regard to sport and recreation facility management in the City of Tshwane Metropolitan Municipality; Conduct a comparative study of the management capacity of Sport and Recreation Facility Managers in different municipalities across Gauteng; and Conduct a needs analysis in communities in the City of Tshwane Metropolitan Municipality to gather information of what communities need with regard to development of new sport and recreation facilities.

"Africa and Beyond: Arts and Sustainable Development is a massive undertaking by thoughtful theorists and practitioners in the creative/cultural industry. The combined effect of the volume is to disabuse the fixed, prevailing conception of the role of culture in society; a view that consigns the arts to the periphery of social life, devoid of any meaningful contribution to the alleviation of poverty and general development. Contrary to this view, the volume presents a more comprehensive, meaningful, insightful set of perspectives and paradigms that ascribe agency to creative/cultural products in all facets of human development. The usefulness of the volume extends beyond the industry itself. It is meant for a broader readership and is therefore highly recommended for specialists and the public at large." – Professor Mokubung Nkomo, Deputy Vice-Chancellor, Tshwane University of Technology, South Africa
