~~The law of targeting – CentAUR~~

The protection of the civilian population and the distinction between combatants and non-combatants is the first cardinal principle of international humanitarian law (IHL). 1 The law of targeting—governing the planning and execution of acts of violence in armed conflict—is the primary means by which this fundamental principle is translated into practice. Yet here the devil (or angel) truly is in the detail, since even the small amount of ‘ black letter ’ law on the topic finds its ...

Targeting is the primary method for securing strategic objectives in an armed conflict. Failure to comply with the law of targeting jeopardizes the achievement of those aims. It is therefore essential that all those involved in or studying issues surrounding targeting have an accurate and complete understanding of this area of law.

Comprehensively examining all aspects of the law of targeting in military operations, the book assesses controversies in the rules governing targeting, including the use of human shields, the level of care required in a bombing campaign, and in the determination of whether someone is directly participating in hostilities.

Targeting is the primary method for securing strategic objectives in an armed conflict. Failure to comply with the law of targeting jeopardizes the achievement of those aims. It is therefore essential that all those involved in or studying issues surrounding targeting have an accurate and complete understanding of this area of law. This book offers the definitive and comprehensive statement of all aspects of the law of targeting. It is a 'one-stop shop' that answers all relevant questions in depth. It has been written in an open, accessible yet comprehensive style, and addresses both matters of established law and issues of topical controversy. The text explains the meanings of such terms as 'civilian', 'combatant', and 'military objective'. Chapters are devoted to the core targeting principles of distinction, discrimination, and proportionality, as well as to the relationship between targeting and the protection of the environment and of objects and persons entitled to special protection. New technologies are also covered, with chapters looking at attacks using unmanned platforms and a discussion of the issues arising from cyber warfare. The book also examines recent controversies and perceived ambiguities in the rules governing targeting, including the use of human shields, the level of care required in a bombing campaign, and the difficulties involved in determining whether someone is directly participating in hostilities. This book will be invaluable to all working in this contentious area of law.

This book provides an analysis of the law of targeting during an armed conflict; focusing on what is a lawful target, what is proportional collateral damage, and describing a process by which legal responsibility for targeting decisions can be assessed.

The concept that certain objects and persons may be legitimately attacked during armed conflicts has been well recognised and developed through the history of warfare. This book explores the relationship between international law and targeting practice in determining whether an object is a lawful military target. By examining both the interpretation and its post-ratification application this book provides a comprehensive analysis of the definition of military objective adopted in 1977 Additional Protocol I to the four 1949 Geneva Conventions and its use in practice. Tackling topical issues such as the targeting of TV and radio stations or cyber targets, Agnieszka Jachec-Neale analyses the concept of military objective within the context of both modern military doctrine and the major coalition operations which have been undertaken since it was formally defined. This monograph will be of great interest to students and scholars of international law and the law of armed conflict, as well as security studies and international relations.

Newly revised and expanded, The Law of Armed Conflict, 2nd edition introduces law students and undergraduates to the law of war in an age of terrorism. What law of armed conflict (LOAC), or its civilian counterpart, international humanitarian law (IHL), applies in a particular armed conflict? Are terrorists legally bound by that law? What constitutes a war crime? What (or who) is a lawful target and how are targeting decisions made? What are 'rules of engagement' and who formulates them? How can an autonomous weapon system be bound by the law of armed conflict? Why were the Guant á namo military commissions a failure? This book takes students through these LOAC/IHL questions and more, employing real-world examples and legal opinions from the US and abroad. From Nuremberg to 9/11, from courts-martial to the US Supreme Court, from the nineteenth century to the twenty-first, the law of war is explained, interpreted, and applied.

This book offers a multidisciplinary treatment of targeting. It is intended for use by the military, government legal advisers and academics. The book is suitable for use in both military training and educational programs and in Bachelor and Master degree level courses on such topics as War Studies and Strategic Studies. The book first explores the context of targeting, its evolution and the current targeting process and characteristics. An overview of the legal and ethical constraints on targeting as an operational process follows. It concludes by surveying contemporary issues in targeting such as the potential advent of autonomous weapon systems, ' non-kinetic ' targeting, targeting in multinational military operations and leadership decapitation in counter-terrorism operations. The deep practical experience and academic background of the contributors ensures comprehensive treatment of current targeting and use of force issues. Paul Duchaine is Professor for Cyber Operations and Cyber Security, Netherlands Defence Academy, Breda, The Netherlands; and Professor of Military Cyber Operations and Cyber Security at the University of Amsterdam, The Netherlands. Michael Schmitt is Charles H. Stockton Professor & Director, Stockton Center for the Study of International Law, U.S. Naval War College, Newport, Rhode Island, and Professor of Public International Law, University of Exeter, UK. Frans Osinga is Chair of the War Studies Department, Netherlands Defence Academy, Breda, The Netherlands, and Professor of Military Operational Art and Sciences.

In U.S. Military Operations: Law, Policy, and Practice, a distinguished group of military experts comprehensively analyze how the law is applied during military operations on and off the battlefield. Subject matter experts offer a unique insiders perspective on how the law is actually implemented in a wide swath of military activities, such as how the law of war applies in the context of multi-state coalition forces, and whether non-governmental organizations involved in quasi-military operations are subject to the same law. The book goes on to consider whether U.S. Constitutional 4th Amendment protections apply to the military's cyber-defense measures, how the law guides targeting decisions, and whether United Nations mandates constitute binding rules of international humanitarian law. Other areas of focus include how the United States interacts with the International Committee of the Red Cross regarding its international legal obligations, and how courts should approach civil claims based on war-related torts. This book also answers questions regarding how the law of armed conflict applies to such extra-conflict acts as intercepting pirates and providing humanitarian relief to civilians in occupied territory.

How military commanders interpret the rules of targeting impacts not only on whether civilians and civilian objects are harmed in the course of a military operation, but also on the scale of harm that ensues. Commentators have queried whether military commanders observed the law even when parties to a conflict acted in accordance with mandates to protect civilians, as was the case when a coalition of states bombed targets in Libya in 2011. However, limited guidance is publicly available on how military commanders apply these rules on the battlefield. In order to allow military commanders to exercise judgment in determining what steps they are required to take to spare civilians in a specific set of circumstances, the rules of targeting are formulated in an open-ended fashion, which complicates one ' s ability to evaluate whether a particular military operation complies with the law. By examining case studies ranging from Operation Desert Storm in 1991 to Operation Protective Edge in 2014, this book addresses lacunae in current scholarship. It puts forward principles which capture how military commanders deliberate while interpreting what the rules of targeting require in particular scenarios. International humanitarian law, this book contends, places a duty on attackers to assume risk in order to mitigate danger to civilians. Drawing on the field of psychology, this study provides an explanation of how military commanders assess when circumstances do not permit them to inform civilians about a forthcoming attack.
