Three-phase traffic theory is a theory of traffic flow developed by Boris Kerner between 1996 and 2002. It focuses mainly on the explanation of the physics of traffic breakdown and resulting congested traffic on highways.

Three-phase traffic theory - Wikipedia

Abstract In the three phase theory, the traffic phenomena are explained by three phase theory: free flow, synchronized flow, and moving jam. Here, this paper introduces the concept of each phase. Moreover, the paper explains the process of the phase transition. The three phase traffic theory offers qualitative explanation of real traffic.

In a free-flowing network, traffic flow theory refers to the traffic stream variables of speed, flow, and concentration. These relationships are mainly concerned with uninterrupted traffic flow, primarily found on freeways or expressways. Flow conditions are considered "free" when less than 12 vehicles per mile per lane are on a road.

favorite of the apologists of the Aquino administration is the volume of vehicles theory. According to this theory, the monumental traffic that beleaguers Filipinos today is caused mainly by the fact that there are just too many vehicles on the road. The proposed solution, therefore, is vehicle reduction—something that was naturally met by a lot of caterwauling.

Macroscopic traffic flow theory relates traffic flow, running speed, and density. Analogizing traffic to a stream, it has principally been developed for limited access roadways (Leutzbach 1988). The fundamental relationship “ $q=kv$ ” (flow (q) equals density (k) multiplied by speed (v)) is illustrated by the fundamental diagram.

Road and traffic signs are illustrated in the Highway Code, and you should try to learn them as you will no doubt come across them in your driving theory test. In general, signs in triangles give warnings, signs in circles give orders and signs in rectangles give information. Road markings painted on the road surface serve the same purpose and should also be learned.
