OUR SKIES ARE FILLED WITH TROJAN HORSES... "The real UFO story must encompass all of the many manifestations being observed. It is a story of ghosts and phantoms and strange mental aberrations; of an invisible world that surrounds us and occasionally engulfs us; of prophets and prophecies, and gods and demons. It is a world of illusion and hallucination where the unreal seems very real, and where reality itself is distorted by strange forces which can seemingly manipulate space, time, and physical matter¿ forces that are almost entirely beyond our powers of comprehension." John A. Keel (March 25, 1930¿ July 3, 2009) was an American journalist and influential UFOlogist best known as the author of "The Mothman Prophecies." In the mid-1960s, he took up investigating UFOs and assorted forteana and published his first knockout UFO book, Operation Trojan Horse, in 1970. The book shredded the then trendy nuts-and-bolts extraterrestrial hypothesis for UFOs in favor of one that linked UFOs to a variety of paranormal and supernatural phenomena that have taken place throughout history. Keel was one of the first to note that the UFO phenomenon appears in different disguises¿ and that one could not begin to decipher this great mystery without first taking into account its many and varied deliberate deceptions.

For 3,000 years, tales of Troy and its heroes - Achilles and Hector, Paris and the legendary beauty Helen - have fired the human imagination. With In Search of the Trojan War, Michael Wood brings vividly to life the legend and lore of the Heroic Age in an archaeological adventure that sifts through the myths and speculation to provide a privileged view of the riches and the reality of ancient Troy. This edition includes a new preface, a new final chapter, and an addendum to the bibliography that take account of dramatic new developments in the search for Troy with the rediscovery, in Moscow, of the so-called Jewels of Helen and the re-excavation of the site of Troy which began in 1988 and is yielding new evidence about the historical city.

This introduction considers whether the Trojan war actually took place and whether archaeologists have discovered the site of ancient Troy.

The dark horse of the New World Order is not Communism, Socialism or Fascism. It is Technocracy. With meticulous detail and an abundance of original research, Patrick M. Wood uses "Technocracy Rising" to connect the dots of modern globalization in a way that has never been seen before so that the reader can clearly understand the globalization plan, its perpetrators and its intended endgame. In the heat of the Great Depression during the 1930s, prominent scientists and engineers proposed a utopian energy-based economic system called Technocracy that would be run by those same scientists and engineers instead of elected politicians. Although this radical movement lost momentum by 1940, it regained status when it was conceptually adopted by the elitist Trilateral Commission (co-founded by Zbigniew Brzezinski and David Rockefeller) in 1973 to be become its so-called ""New International Economic Order."" In the ensuing 41 years, the modern expression of Technocracy and the New International Economic Order is clearly seen in global programs such as Agenda 21, Sustainable Development, Green Economy, Councils of Governments, Smart Growth, Smart Grid, Total Awareness surveillance initiatives and more. Wood contends that the only logical outcome of Technocracy is Scientific Dictatorship, as already seen in dystopian literature such as "Brave New World" by Aldous Huxley (1932) and "Nineteen Eighty-Four" by George Orwell (1948), both of whom looked straight into the face of Technocracy when it was still in its infancy. With over 250 footnotes, an extensive bibliography and clarity of writing style, Wood challenges the reader to new levels of insight and understanding into the clear and present danger of Technocracy, and how Americans might be able to reject it once again.
